

General, Musculoskeletal & Vascular Ultrasound

Ultrasound is a widely used technique which produces detailed images of the body.

Ultrasound uses high frequency sound waves (much higher than human ears can hear) which are produced by the ultrasound probe (transducer). The reflected sound waves are detected by the probe and used to create an image which is displayed on the screen of the ultrasound machine.

Ultrasound can be used to gain information about a variety of conditions, including pregnancy, and gallstones.

An ultrasound which shows blood flow may also be called Colour Flow Doppler or Duplex Scan.

Preparation

Depending on the area to be scanned, you may have to follow some special instructions about the amount of food and fluids you consume prior to your scan. You may be asked to fast or to drink some water.

Upper abdominal scans (including the liver, gall bladder and pancreas) require you to fast for 6 hours beforehand.

If you have diabetes, please inform your referring doctor who will advise you of any special dietary instructions.

If you have diabetes and are on insulin, or suffer epilepsy, please discuss the timing of your scan with our booking staff.

Scans of the kidneys, bladder and, in men, the prostate gland require a full bladder and you will be asked to drink 1 litre of water 1 hour before. If you feel you are 'bursting' before your appointment, please try to only partly empty your bladder. A full bladder is not needed for examination of the scrotum and testes in men.

There is no preparation required for Musculoskeletal or Vascular (Doppler) ultrasound scans.

Please take your normal medication with a sip of water.

Procedure

You may be asked to change into a gown, but you will be covered during your examination except for the area required to be examined.

You may be asked to lie on a table for the ultrasound examination.

A layer of warmed gel will be spread over the area to be examined to facilitate good contact as this helps to produce the best possible images. The ultrasound transducer is then placed over the area to be investigated.

Ultrasound examinations are not painful and are generally not invasive. However, some examinations may be uncomfortable depending on the type of procedure required and the preparation for this, e.g. a full bladder, may be uncomfortable.

Scans of the shoulder or other joints may require your cooperation in performing special movements while scanning is performed.

Colour Doppler ultrasound uses a special technology to look at blood flowing in arteries and veins. This is most commonly used to study the carotid arteries in the neck (supplying the brain) and veins in the legs.

During these studies you will often hear strange noises as signals from flowing blood

is transformed into sound. We may need to gently squeeze the calf a few times when examining the leg veins.

How long will the procedure take?

Scanning may take up to 1 hour but generally most appointments are for 30 minutes. The radiologist may come to speak with you and view the screen. This is quite routine and should not cause alarm.

Films are produced and the images are interpreted by the radiologist who then writes a report for your referring doctor.

Please contact your referring doctor to discuss the results.

PLEASE BRING ANY PREVIOUS X-RAYS OR SCANS WITH YOU ON THE DAY OF YOUR EXAMINATION.

CONFIRM ANY PREPARATION REQUIRED WITH STAFF WHEN MAKING YOUR APPOINTMENT.

Your doctor may request to go filmless

With the growing use of digital imaging, Ultrascan Radiology is giving doctors the opportunity to not receive hard copy films and to replace them with electronic reports and images – in other words, go “filmless”.

If your referring doctor elects to go “filmless,” once you have completed your medical imaging examination, you will no longer have to wait for x-ray films. The images will be sent electronically to your doctor’s computer together with a report from our Radiologist.

If you require films in the future, all films are stored digitally and can be requested at anytime with 24 hour notice.

ULTRASOUNDS ARE PERFORMED AT OUR ERINA,
KANWAL, BRISBANE WATERS & LONG JETTY CLINICS

Central Coast Radiology & Nuclear Medicine clinics

Erina

194 The Entrance Road, Erina 2250
Ph: 4365 1866 | Fax: 4365 1814

Long Jetty

4/13-15 Thompson Street, Long Jetty 2261
Ph: 4332 5532 | Fax: 4332 6262

Brisbane Waters

21 Vidler Avenue, Woy Woy 2256
(in Brisbane Waters Private Hospital)
Radiology: Ph: 4343 1066 | Fax: 4344 2171
Nuclear Medicine: Ph: 4342 2061 | Fax: 4342 7681

Gosford (Nuclear Medicine)

99-101 Holden Street, Gosford 2250
Ph: 4323 1844 | Fax: 4323 1261

Kanwal

654 Pacific Highway, Kanwal 2259
(in the Medical Complex at Wyong Hospital)
Radiology: Ph: 4393 0200 | Fax: 4393 0201
Nuclear Medicine: Ph: 4393 1000 | Fax: 4393 2111
